

Contents

Lab No.	Title	Signature
1	Learning Basic Linux Commands	
2 (a)	WAP in C to demonstrate the process creation and termination in Linux.	
2 (b)	WAP in C to demonstrate the thread creation and termination in Linux.	
3 (a)	WAP in C to simulate shared memory concept for IPC.	
3 (b)	WAP in C to simulate message passing concept for IPC.	
4 (a)	WAP in C to simulate FCFS CPU Scheduling Algorithm	
4 (b)	WAP in C to simulate SJF CPU Scheduling Algorithm	
4 (c)	WAP in C to simulate SRTF CPU Scheduling Algorithm	
4 (d)	WAP in C to simulate Round Robin CPU Scheduling Algorithm	
4 (e)	WAP in C to simulate Non-Preemptive Priority Scheduling Algorithm	
4 (f)	WAP in C to simulate Preemptive Priority Scheduling Algorithm	
5 (a)	WAP to implement Bankers Algorithm for multiple type of resources to decide safe/unsafe state.	
5 (b)	WAP for deadlock detection in the system having multiple type of resources. The program should list the deadlocked process in case of deadlock detection results true	
6 (a)	WAP in C to simulate FIFO Page Replacement Algorithm	
6 (b)	WAP in C to simulate Optimal Page Replacement Algorithm	
6 (c)	WAP in C to simulate LRU Page Replacement Algorithm	
6 (d)	WAP in C to simulate Second Chance Page Replacement Algorithm	
6 (e)	WAP in C to simulate LFU Page Replacement Algorithm	
7 (a)	WAP to simulate FCFS Disk Scheduling Algorithm	
7 (b)	WAP to simulate SSTF Disk Scheduling Algorithm	
7 (c)	WAP to simulate SCAN Disk Scheduling Algorithm	
7 (d)	WAP to simulate C-SCAN Disk Scheduling Algorithm	
7 (e)	WAP to simulate LOOK Disk Scheduling Algorithm	
7 (f)	WAP to simulate C-LOOK Disk Scheduling Algorithm
